A black and white photograph of a large fountain in a park. The fountain is the central focus, with water spraying upwards in a dense, vertical column. The background is filled with numerous palm trees, some in the foreground and others further back, creating a sense of depth. The sky is clear and light-colored. The overall scene is a classic park setting.

CALIBRACIÓN DEL MODELO HIDRÁULICO

A person is shown in profile from the back, looking at a large, multi-panel display. The display shows a complex network diagram with numerous nodes and connecting lines, primarily in shades of blue and green. The diagram appears to be a power grid or a similar infrastructure network. The person is wearing a light-colored shirt. The overall scene is dimly lit, with the primary light source being the screen itself.

A close-up photograph of a hand giving a thumbs up gesture. The hand is positioned in the center-right of the frame, with the thumb pointing upwards and the other four fingers curled into a fist. The skin is a light, natural tone, and the lighting highlights the texture of the skin and the creases on the hand. The background is a solid, deep black, which makes the hand stand out prominently. The overall mood is positive and affirming.

Vodafone Spain and Huawei send first NB-IoT message over a commercial network

Written by [Scott Bicheno](#) | 11 December 2015 @ 16:32

Vodafone, Huawei and u-blox are claiming the first successful commercial trial of pre-standard NB-IoT (Narrowband Internet of Things) in Spain.

Vodafone and Huawei Complete First Successful Commercial Trial of Pre-Standard NB-IoT

Dec 21, 2015

in

[Moncada, Spain, Dec. 21, 2015] Vodafone Group, Huawei, and u-blox have completed the first successful commercial trial of pre-standard NB-IoT (Narrowband Internet of Things). NB-IoT is a new technology that will extend the utilization of Internet of Things (IoT) by making it more efficient to connect objects requiring a long battery life and are located in hard to reach areas to the Internet by ways of mobile connectivity. Low Power Wide Area (LPWA) technology will connect more objects to the Internet of Things. Able to be deployed over existing mobile networks, NB-IoT has strong industry support as an LPWA technology in licensed spectrum.
